

Wireless Survey System

Client: Cathedral Stone

"It has been absolutely refreshing to work with such a friendly team with a can-do attitude when it comes to our wide range of requirements. At long last I feel my company is starting to make some meaningful headway with IT."

- James Charwood,
Owner

Cerebrum designed a wireless video network which allowed stonemasons Cathedral Stone to broadcast images from the spire of St Paul's Cathedral in Melbourne to architects overseeing the maintenance work. Despite being a custom-built solution, the system was significantly cheaper than all other options available to Cathedral Stone and has now become an integral part of their project operations.
